# August Product of the Month: MINI-SPLIT SYSTEMS

A ductless system, also known as a "split" air conditioner system, is made up of or includes two components: an indoor unit to deliver conditioned air to the room, and an outdoor air conditioner located outside of the house. Compact refrigerant lines run between the two units, eliminating the need for bulky ductwork.

Ductless systems are ideal for older homes that have no ductwork, room additions, or areas in homes that just never seem to be the right temperature or are never comfortable.

Rebate Eligible Equipment Marked with a
